Baseline MRI
Last-known recorded MCI
Second MRI
Last-known recorded MCI
Prediction time (landmark)
End of horizon
Change interval: 3–18 months
Outcome window: 24 calendar months
Time
baseline volumes
M1 Baseline
predicted risk
baseline volumes + change
M2 Baseline + ΔMRI
predicted risk
M3 Second MRI
second-MRI volumes only
predicted risk
second-MRI volumes + change
M4 Second MRI + ΔMRI
predicted risk
Outcome classification
• Event: first clinical AD diagnosis recorded after the second MRI and within the window
• Non-event: CN or MCI recorded at or after the horizon, no dementia
• Unclassified: excluded (not negative)
